

Hearing Protection

Exposure to high levels of noise causes hearing loss and may cause other harmful health effects as well. The extent of damage depends primarily on the intensity of the noise and the duration of the exposure.

Visit www.osha.gov for complete details and regulation requirements.

Hearing Protection Styles:

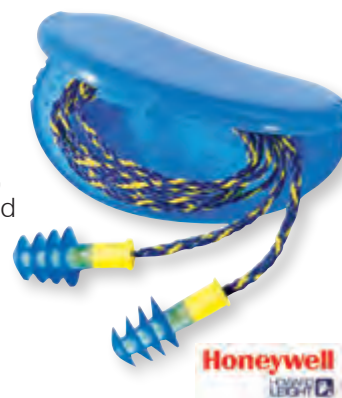

Disposable Earplugs

Are made of formable material and are designed to be inserted into a person's ear canal, where they expand and conform to the shape of each individual's ear canal.

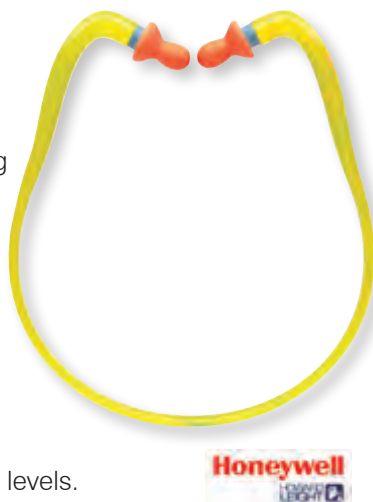

Reusable Earplugs

Usually are premolded and made from silicone, plastic or rubber and are available in several different sizes.

Ear Caps

Seal the opening to the ear without entering the ear canal. Similar to band-type hearing protectors, they usually come on a band that can be placed around the neck when the caps are not in use for convenience in work areas with varying noise levels.

Earmuffs

Suppress unwanted noise by completely covering the outer ear.

Communication Headsets

Combine the entertainment benefit of a digital AM/FM radio with advanced sound amplification technology for improved situational awareness.

Active Noise Canceling Headsets

Use an electronic system to cancel unwanted background noise while at the same time enhancing the quality of audio delivered through the headset.

3M™ E-A-R™ Classic™ Earplugs

Features moisture- and flame-resistant design. Slow-recovery foam provides comfortable, effective seal while exerting low pressure in ear canal. Classic™ Plus are slightly longer than regular E-A-R™ Classic™ earplugs to fit deeper into the ear canal and provide higher noise reduction. Test compatible with 3M™ E-A-Rfit™ Validation System.

3M™ E-A-R™ Classic™ SuperFit™ 30 and SuperFit™ 33 Earplugs

Cylindrical shape fits wide range of ear canals. Best fit achieved when plug is fully inserted so no ring is visible. Test compatible with 3M™ E-A-Rfit™ Validation System. 2,000 Pair/case.

WARNING

These hearing protectors help reduce exposure to hazardous noise and other loud sounds. **Misuse or failure to wear hearing protectors at all times that you are exposed to noise may result in hearing loss or injury.** For proper use, see supervisor, *User Instructions*, or call 3M in U.S.A. at 1-800-243-4630. In Canada, call Technical Service at 1-800-267-4414. If there is any drainage from your ear or you have an ear infection, consult with your physician before wearing ear plugs. Failure to do so may result in hearing loss or injury.

* NRR is the Noise Reduction Rating in decibels (dB). It is the average noise reduction obtained by a group of people wearing a specific hearing protector in a laboratory test. Research suggests that many users will receive less noise reduction than indicated by the NRR due to variation in earplug fit and wearing time. It is recommended that the NRR be reduced by 50% for estimating the average amount of noise reduction provided.

3M™ E-A-R™ Metal Detectable Earplugs

Test compatible with 3M™ E-A-Rfit™ Validation System.

- **UltraFit™** include stainless steel ball positioned in stem with metal detectable cord. Feature pre-molded, triple-flanged design and require no roll-down or sizing. Comfortable, effective, washable and reusable. Available with metal detectable Econopack cord.
- **Express™ Pod Plugs™** feature easy insertion, paddle-style grips for correct fitting and no roll-down. Packaged in pillow packs.
- **Yellow Neons™** include stainless steel ball encapsulated into foam of the earplug with metal detectable cord. Roll-down required.

! WARNING

These hearing protectors help reduce exposure to hazardous noise and other loud sounds. **Misuse or failure to wear hearing protectors at all times that you are exposed to noise may result in hearing loss or injury.** For proper use, see supervisor, *User Instructions*, or call 3M in U.S.A. at 1-800-243-4630. In Canada, call Technical Service at 1-800-267-4414. If there is any drainage from your ear or you have an ear infection, consult with your physician before wearing ear plugs. Failure to do so may result in hearing loss or injury.

* NRR is the Noise Reduction Rating in decibels (dB). It is the average noise reduction obtained by a group of people wearing a specific hearing protector in a laboratory test. Research suggests that many users will receive less noise reduction than indicated by the NRR due to variation in earplug fit and wearing time. It is recommended that the NRR be reduced by 50% for estimating the average amount of noise reduction provided.

3M™ Peltor™ X Series Earmuffs

Electrically insulated (dielectric) wire headband on over-the-head models. Features earcup tilt for optimum comfort and efficiency. Twin headband design helps reduce heat buildup with good fit and balance. Wire headband offers comfortable pressure during prolonged usage. Offers ear cushion foam technology for an effective acoustic seal and reliable protection. Spacer design on X3, X4 and X5 models improves attenuation without excess bulk or weight. Despite larger earcups, the X5 is lightweight with excellent balance and comfort; features NRR 31 dB; provide high noise reduction in both standard headband and hard hat-attached models; and unique attenuation from combination of foam in the earcups, cushions and spacer and cup design. 10/Case.

3M™ Noise Indicator NI-100

Designed for variable noise environments to help workers identify potentially hazardous noise levels and know when hearing protection devices (HPDs) may be required. Green flashing LED indicates that noise levels are below 85 dB where HPDs may not need to be worn; red flashing LED indicates noise levels are above 85 dB, a potentially dangerous noise level where HPDs may be required. Small, lightweight design (.6 oz.) clips to shirt or jacket and includes a rechargeable battery that operates for up to 200 hours between charges. If not manually powered off, device will automatically power off after approximately 10 hours. Dimensions: 2" L x 1.4" W x 0.5" D. Can be used as an effective training tool within a hearing conservation program (consult OSHA Standard 29 CFR 1910.95) to help ensure workers know when and where to wear hearing protection. 6' USB 2.0 5-pin mini cable connects a computer or USB hub to the 3M Noise Indicator NI-100 for recharging, sold separately. 10/Case.

SYNC® Electro® Digital FM Radio Earmuffs

Combines the entertainment benefit of a digital FM radio with advanced sound amplification technology for improved situational awareness. Directionally placed stereo microphones amplify and enhance ambient sound up to 82 dB, allowing workers to hear important communication more effectively. For ambient noise exposures above 82 dBA, the listening circuitry manages speaker volume to a level that does not exceed 82 dBA.
